Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is vague and indefinite what is intended by "microcapsule". It not clear what type of microcapsules is intended.

Claims 8-22 and 28 are not clear how a method of leak detection is further limited by the lists of encapsulated precursors. Further, even upon consideration of these lists of precursors, it is not clear how the precursors are created from the lists.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13, 15, 18-22 and 24-26 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Asano et al. (USP 4,931,420).

Asano et al. teach a time temperature history indicator that will indicate thawing and subsequent leakage of the food product. Column 3 lines 28+ describe substrate(3), color developer(4), barrier layer(5) and microcapsulated ink compositions(6). Columns

Application/Control Number: 10/644,569

Art Unit: 1743

7-8 teach use of impregnated paper and various polymers. Column 13 teaches various polymer materials used for the barrier. Column 14 lines 3+ teach transparent PET,PP, PE, and PC films. Column 9 lines 31+ teach the claimed indicators and the use of phenols. Column 11 lines 5+ teach color developers and benzoquinones. Column 12 teaches amines and the claimed counter ion salts.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Sturzinger (USP 3,888,631).

Sturzinger teach a microcapsulated indicated that will be detected when the microcapsule is ruptured. The Office has read this as detection of a leak from the microcapsulte. The microcapsule indicator is placed on a paper substrate with the appropriate color developing reagents.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lyle A. Alexander whose telephone number is 571-272-1254. The examiner can normally be reached on Monday, Wednesday and Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
